REPORTING

ALL VISUAL CUES SHOULD HELP YOUR READER INTERPRET YOUR DATA.

***EXTRA VISUAL
DECORATION WILL
HURT YOUR AUDIENCE'S
ABILITY TO INTERPRET
THE MESSAGE OF THE
VISUALIZATION. THIS
EXTRA DECORATION IS
CALLED "CHART JUNK."***

REPORTING

WHAT is your main message?

WHO is your audience?

HOW could they destroy your message?

DATA RELATIONSHIPS

DEVIATION

This examines how data points relate to each other, particularly how far any given data point differs from the mean. Example: Amusement park tickets sold on a rainy day vs. a regular day.

DISTRIBUTION

This shows data distribution, often around a central value. Example: Heights of players on a basketball team.

PART-TO-WHOLE RELATIONSHIPS

This shows a subset of data compared to the larger whole. Example: Percentage of customers purchasing specific products.

NOMINAL COMPARISON

This is a simple comparison of the quantitative values of subcategories. Example: Number of visitors to various websites.

TIME-SERIES

This tracks changes in values of a consistent metric over time. Example: Monthly sales.

CORRELATION

This is data with two or more variables that may demonstrate a positive or negative correlation to each other. Example: Salaries according to education level.

RANKING

This shows how two or more values compare to each other in relative magnitude. Example: Historic weather patterns, ranked from the hottest months to the coldest.
