The Effect Over Time

Success Rate Over Time

Key Observations

- Before**
Groups similar
- During**
Clear separation
- After**
Effect persists!

The effect persisted even after the boost was reset!

Players Love It

+51%

more boost usage

Group A

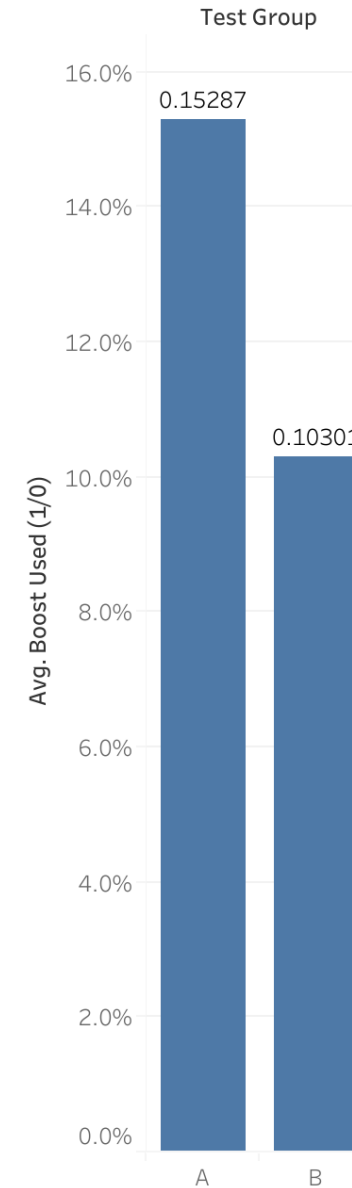

15.6%

Group B

10.3%

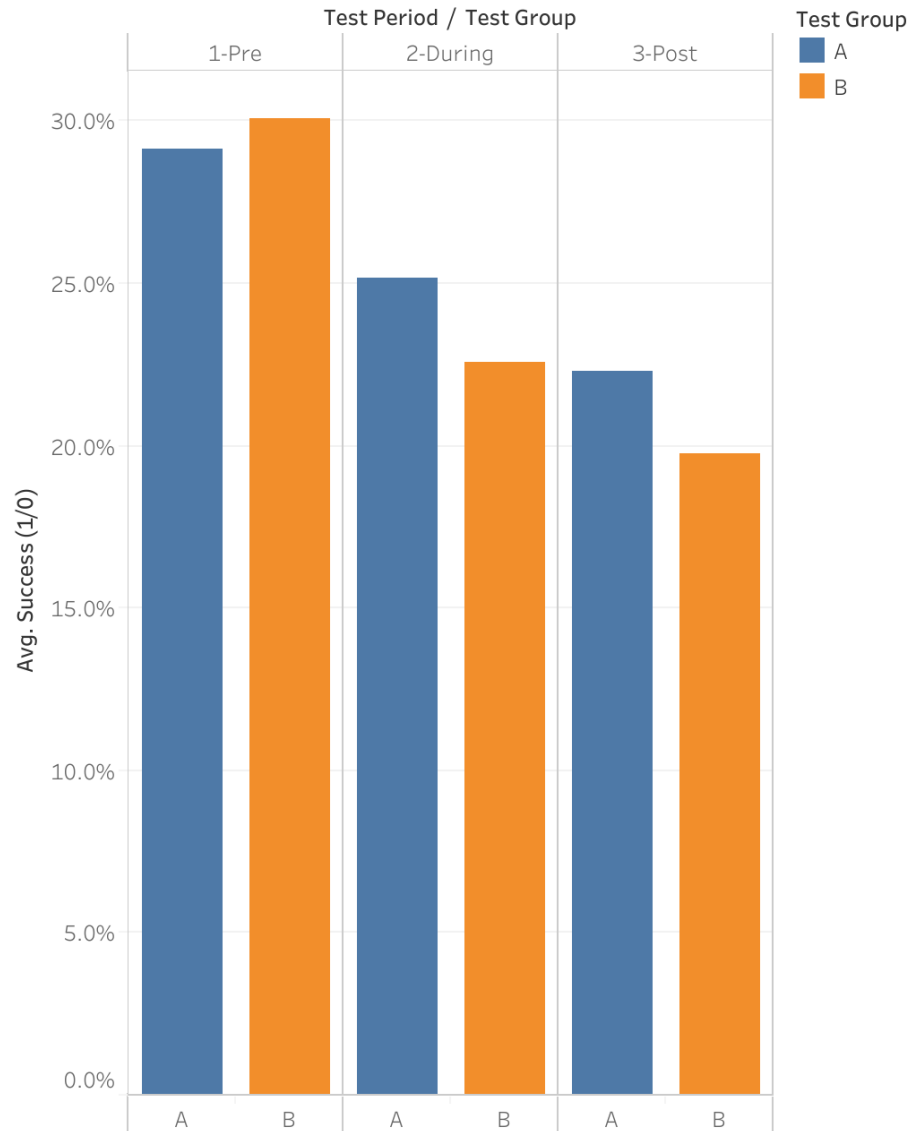

Players recognize value and
actively use the feature more

Boost Usage Rate

The Full Picture

Success Rate by Test Period

PRE-TEST

A: 29.1% vs B: 30.1%

-1.0 pp (similar baseline)

DURING TEST

A: 25.1% vs B: 22.5%

+2.6 pp improvement

POST-TEST

A: 22.3% vs B: 19.7%

+2.6 pp (effect persists!)

Key Insight: Effect persists = Learned behavior / Habit formation

The Trade-offs

FOR ROLLOUT

- +2.6% success rate
- Statistically proven ($p < 0.001$)
- 51% higher engagement
- Lasting positive effect

AGAINST ROLLOUT

- May reduce game challenge
- Boost dependency risk
- Unknown monetization impact
- Small baseline difference

Benefits significantly outweigh risks with proper monitoring

Recommendation

ROLL IT OUT

**Proven
Improvement**

+2.6% success

**Higher
Engagement**

+51% boost use

**Lasting
Effect**

Persists after reset

With Monitoring:

Long-term retention • Monetization metrics • Difficulty balance
